 Eden

Ecosystem Map

Our Industry

Industry: Fruit & Vegetable Markets
NAICS: 445230

- Subcategory of Specialty Food Industry (NAICS: 4452)
- Retailing fresh fruits and vegetables
- Via electronic home shopping, mail-order, or direct sale
- Growing and selling vegetables and/or fruits at roadside stands

ICA Results

Opportunity Description

- The AirBNB for farmers markets.
- Provides sellers more access to buyers, and it provides buyers better access to locally grown food
- Supply chain transparency
- Authenticity
- Interpersonal interactions
- Sustainable food
- Shopping convenience
- Analytics

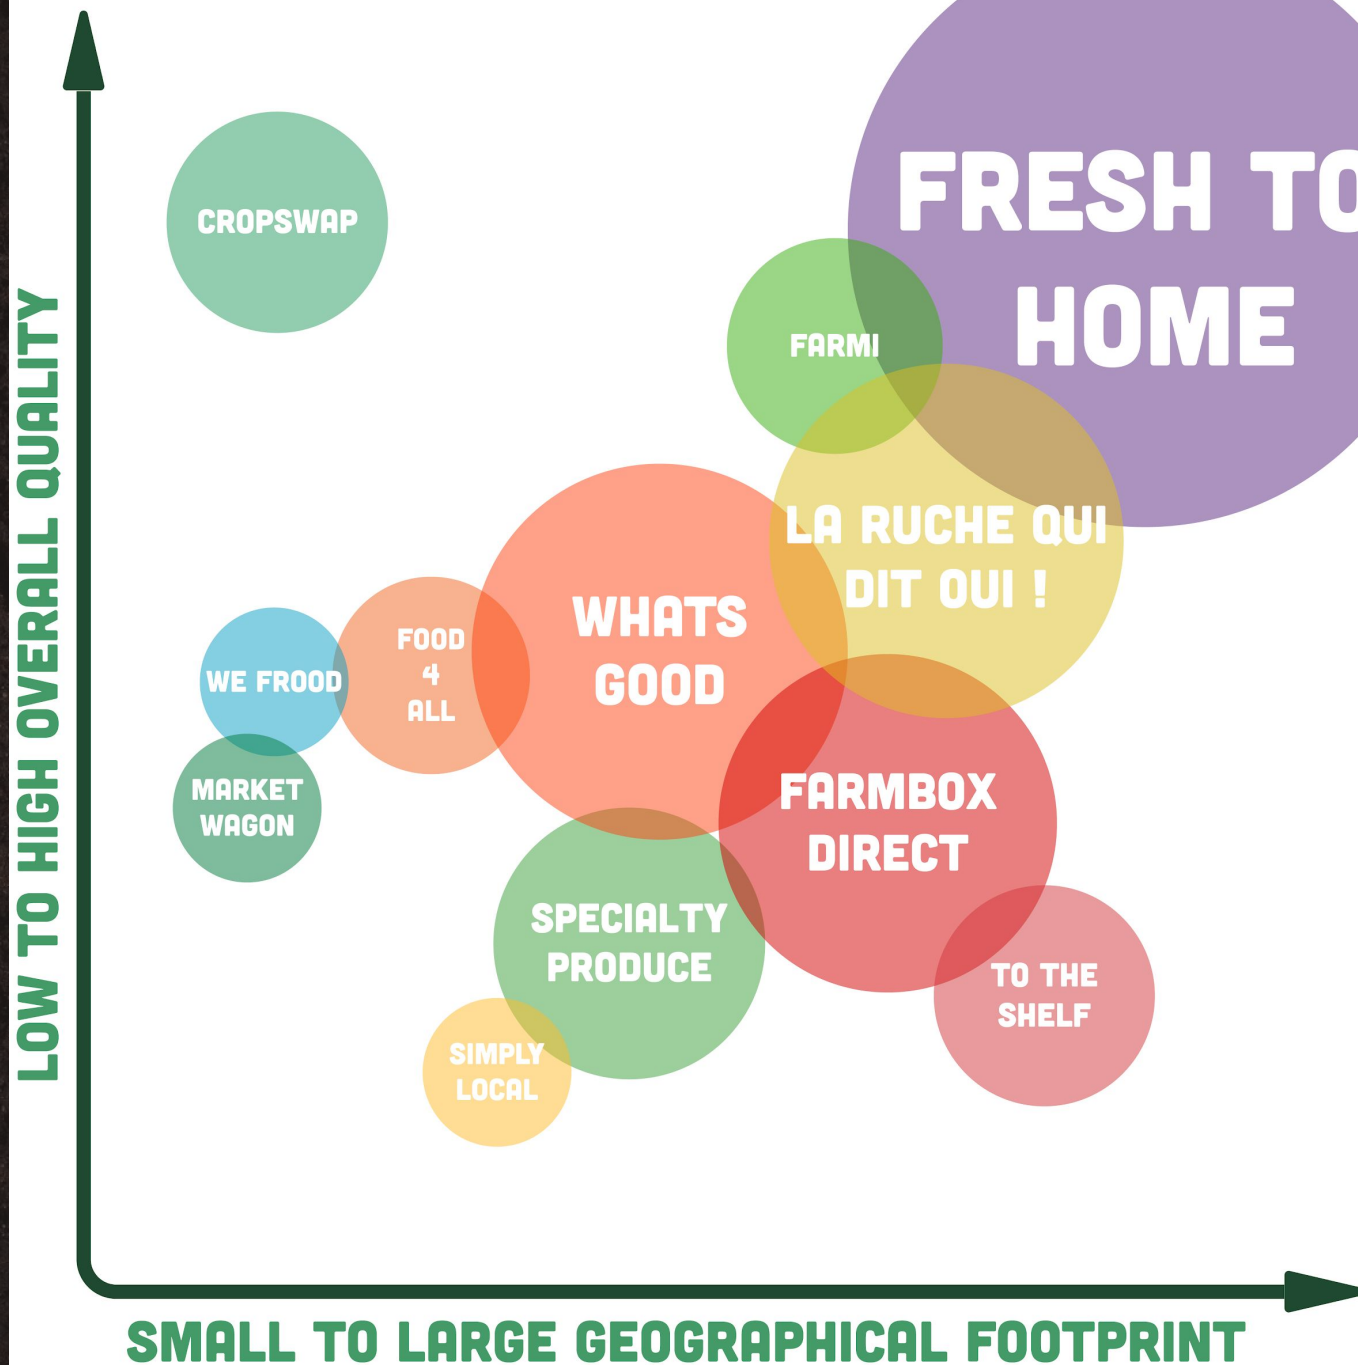

ICA Results

Driving Forces

- Price of Food
- Disposable Income & Retail Gasoline Prices
- Sustainability
- Supply Chain Transparency and Traceability
- Convenience

Competitive Position of Major Companies

Strategic Group Map

Key Success Factors

- High Adaptability to Consumers' Dynamic shifts in Preferences
 - Covid times is a recent example
- Wide Range of Products
- Strategic Location Selection
- Diverse Range of Utilized Marketing Avenues
- Cost Control

Industry Prospects and Overall Attractiveness

- Attractive Industry Factors
 - >10% projected growth
 - Agriculture is a market of commodities
 - Emerging market growth potential
- Attractive Industry Factors
 - Low margin business
 - Fragile, complex, & opaque supply chain
 - Food inventory waste
 - High transportation costs & environmental impact

Special Industry Issues/Problems

- Challenges in digitization
- Globalization increases complexity
- Local food movement
- Supply chain transparency
- Sustainability movement

Profit Outlooks

- 3% – 10% projected growth rates for grocery e-commerce through 2025
- Decreasing costs from tech adoption is an opportunity

ICA Conclusions

- Opportunities
 - Technology – Seamless and Functional UI/UX & analytics
 - Covid-19 accelerated trends
 - Fragmented market
 - Global footprint
- Challenges
 - Meet all expectations of demanding customers
 - Buy-in from sellers

We welcome your feedback!

Next Steps

- Reassess assumptions
- Build wireframe MVP
- Finish ICA

EDEN Extras

EDEN University (Educational feature)

Educational section of the app/website that teaches about all the components in the EDEN universe. Included would be master classes, videos, how-to's, etc...

EDEN General Store (Affiliate Marketing)

Users can purchase any supplies they might need to start their journey as an EDEN seller

EDEN Community (Social Media Platform)

Social media/blog/networking site for all in the EDEN community

Buyer Archetype

Adults comfortable with technology aged 18+ with at least some disposable income who value a sense of community, environmental stewardship, and personal well-being and use their resources to participate in activities that support their personal values, which boosts their self-esteem

Customer Discovery Insights

Our Points of Differentiation

- Well designed and well functioning
- Free analytics
- Accepts payments in multiple forms
- Can scale from backyard growers to large institutions
- available in multiple languages
- available globally
- Interchangeable functional app and website,
- Local champion
- cryptocurrency and blockchain

Customer Discovery Insights

Surprises

- Most people don't care about organic and value local over organic
 - Some people actively avoid organic or do not like it
- Many buyers are also potential or current sellers
- Food procurement can be a very hot button issue
- People who sell honey and eggs have no problem selling their product

Vision & Mission

Vision: Decentralize and democratize the food supply chain

Mission: Build a digital platform that connects people with each other and their food

Customer Discovery Insights

Sellers (Growers)

- Pain Points: farmers markets, labor, online presence & content management, analytics, marketing, USDA compliant meat processors, delivery logistics, USDA certified kitchen, customer education, same day ordering
- All have social media presence, value connections, know where food comes from, ethical & sustainable sourcing, CSAs popular, most don't sell to big groceries but some restaurants
- Big shift in switching to pre-orders from covid, increased demand since covid

Industry Experts

- Opportunities: Analytics, UI/UX, global focus, seamless transactions, cryptocurrency, institutional buyers, local legal mandates, final mile logistics
- Pitfalls: Industrial partner sabotage, platform not content provider, multiple pricing strategies, broadline supplier requirement, product consistency, food safety, consumer education and expectations
- Competitors: Shortfalls with their business models, going away from CSAs, Covid induced changes, reducing final mile friction is key, consumer education

Buyers

- If convenient, most people will opt to buy local and/or organic if able
- Some price premium will be paid for fresh/premium food but still a commodity
- Convenience is Key

Customer Discovery Insights

New Issues

- The regulatory landscape will present a challenge
- The culture and values around food are a barrier to people using the app
 - Some people don't know how to cook their own food, don't want to spend the time, don't value it because of marketing messaging, think fresh is too expensive
- 2 different business cases, 1 for rural and 1 for urban
- Understand why people don't buy local more (convenience, anchor pricing, affordability, etc..)
